

## 4C High Security Mailboxes

Constructed of heavy gauge galvanized steel with stainless steel components, security and perfection are put first in these USPS approved 4C Horizontal mailboxes. With the flush surface design, concealed stainless steel hinges, and interlocking master loading doors, tampering and prying open doors is close to impossible. We are the only vendor with a double-wall door construction that is sold at the same price of a single-wall door construction. Double-wall door design features 2 times the material weight when compared to an aluminum 4C constructed box and increases pull test capacity. Closer tolerances of each box reduces the size of pry points. Units feature the new USPS-1172 910A lock with 3 keys and a protective lock rim. Improved 3-point locking system for tenant compartments secure in four places including hinge side for the finest locking mechanism in the industry. Carrier access door provides easy access for Postal Carrier to release the master loading doors. Each unit comes with an outgoing mail slot and carrier access door. Outgoing mail slot features a sawtooth guard to prevent mail from being fished out. Larger units include tamper resistant parcel locker doors. Weatherproof, Postal Grey powder coat finish protects units from vandalism and the elements. Units quickly install between wall studs (for mounting instructions, go to [www.mailproducts.com](http://www.mailproducts.com)).
